**EXTRA HEAVY  
PARTS AND TOOLS**

# FOR EXTRA HEAVY PARTS AND TOOLS

## *Each Drawer is Designed to carry 250 lbs.*

### A Place for Everything

"A place for everything and everything in its place" is even more important when the parts and tools are extremely heavy. Digging for a tool or part that is buried under hundreds of pounds of other tools or parts is not only a waste of valuable time and energy for your service people, but makes it almost impossible for them to maintain any semblance of a reliable inventory of parts and tools while working at the job site.

Each cabinet drawer fully opens on roller tracks and is capable of carrying 250 lbs.

Adjustable Dividers

Welded Dividers

Choose From Seven  
Divider Arrangements

### Built to Your Specifications from Heavy Gauge Steel

Using all welded construction, Baker cabinets are built of 11 gauge steel with 14 gauge steel drawers. Drawers may be selected with adjustable or permanently welded partitions. Each drawer is test rated to handle 250 lbs. and built to withstand reasonable abuse. Everything about the entire drawer assembly is designed to sustain these heavy loads even when the service trucks are being driven over very rough terrain.

### Ordering Takes Just Minutes

Whether you wish to fill a vertical or horizontal enclosure, we will design the rack and drawers to take full advantage of the available space. Using our simple fill-in-the-blanks order form, you will find it takes only minutes to lay out a design most suitable to your needs. First, consider the height and depth which may be required to satisfy the largest tools or parts you will need to carry. Say that you decide that two large drawers will suffice, as shown in the photo, then you can quickly determine just how many smaller drawers to include from the vertical space you have left.

Cabinet above includes Shelf and Mounting Brackets.

Easy Bolt-In Installation,  
including Mounting Brackets and Bolts.

### Think about it...

If you have reason to believe that your service people are spending far too much time looking for or being forced to leave the job for parts or tools, it's time to consider equipping your trucks with Baker Extra Heavy Duty Cabinets.

Just Give Us the Dimensions of Your Enclosure and the Size and Number of Drawers...

## WE FOUND A NEED AND FILLED IT

About 1987 it became obvious that no matter what brand of so-called heavy duty tool and parts cabinets we purchased to install in heavy construction and mine equipment service trucks we were customizing, the cabinets were just not holding up. The rough roads that these service trucks were forced to traverse going into mine and construction sites, in addition to the extreme weight of the tools and parts, were literally tearing the cabinets apart. With little choice, it was decided that we either solve this problem or likely see an end to a major element of our business. Being a fabrication shop with all the necessary facilities, we decided to design and build some really tough, heavy duty service truck cabinets. As far as we could determine, these were the first ever manufactured in this country. Over the past eight years, through word of mouth alone, these Baker Extra Heavy Duty Tool and Parts Cabinets have developed a reputation that has spread throughout the industry to a point where we have decided it is time that we market these cabinets nationally.

If you have need for extra heavy duty tool and parts cabinets for your service trucks, you need look no further. Baker Cabinets are built of heavy gauge steel, with drawers mounted on roller tracks, and are load tested for 250 pounds of parts or tools per drawer. Each drawer is secured with a heavy duty spring loaded latch. Baker Extra Heavy Duty Cabinets are designed to be tossed and bounced over the worst of roads, and handled by men who have not been told to treat them with tender loving care.
